

Analysis software flowmeter Series FM-2000, FM-5000

Analysis software Series FM-2000, FM-5000

The clear analysis software enables accurate representation of the Flow characteristic.

To display in various formats is also naturally as the display of the digital outputs.

With the help of this software your analytics reports can easily be monitored, analyzed and documented.

Also, your charts can be easily integrated in the Standard office programs.

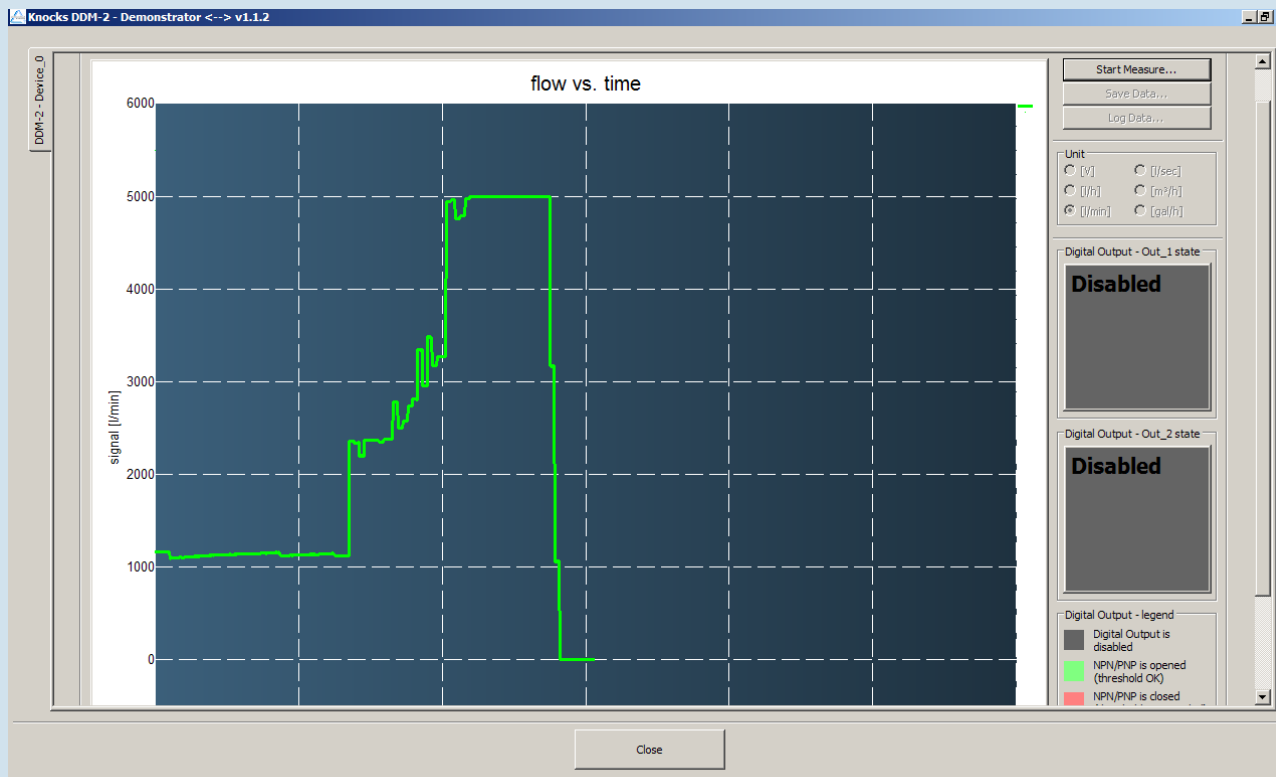

measurement setup

With the aid of a data converter (for example, USB-1208LS Meilhaus) the measured signals (0-10Volt) prepared for the recording via the USB interface.

Measurement recording

The measured values of the USB port of your computer will be displayed and can be easily recorded.

Measurement recording

Messwertauswertung

Measurement analysis

The measured values can be evaluated following the measurement graph. The display includes the representation of the flow rate, total consumption and the switching state of the digital outputs of the flowmeter.
